

ABSTRACT OF THE DISCLOSURE

The floating aluminum box to protect dockworkers is an aluminum cube with each side being approximately eighteen inches long. The floating aluminum box is watertight and made of one-
5 quarter inch thick aluminum plate and of welded construction. The floating aluminum box has a front, back, two sides, a top, and a bottom. The floating aluminum box has an internal support structure having two concentric aluminum pipes and a plurality of bracing plates that extend from the pipes to the sides of the
10 cube. The floating aluminum box is also equipped with a handle and eye brackets.
